

Retail Sales & Profit Review, FY 2025

1,200 orders, 220 customers, 38 products sold, January to December 2025. Amounts in Indian rupees (₹).

TOTAL SALES	TOTAL PROFIT	PROFIT MARGIN	ORDERS
₹5,426,671	₹1,212,441	22.3%	1,200

Five findings and what to do about them

#	Finding	Evidence	Recommendation	Est. profit impact
1	Discounts above 20% destroy profit: this band loses money while undiscounted orders earn the best margin.	Orders above 20% discount: 190 (16% of all orders) with a profit of -₹47,109 (margin -5.4%). No-discount orders earned 36.2%.	Cap discounts at 20% and require manager approval above that. Review the 30 to 50% discounts on Furniture first.	₹47,109
2	Furniture brings a third of the sales but almost no profit; Bookshelf is a top seller that loses money.	Furniture is 31% of sales but only 3.4% margin (₹56,785). Bookshelf: ₹432,523 sales, a loss of ₹22,877.	Raise Bookshelf, Study Table and Shoe Rack prices or negotiate supplier cost; stop discounting Furniture beyond 10%.	₹77,802
3	A small set of products carries the business, and a few catalogue items barely sell.	13 of 38 products sold are Class A and make 79.2% of sales. Noise-Cancelling Headphones alone: 20.2% of sales, ₹275,057 profit. 4 products sold under 10 units.	Never let Class A products run out of stock and negotiate supplier terms on them. Clear or delist the dead-stock items to free cash.	₹37,024
4	Sales peak in Q4 and fall hard after November; Q1 is the weakest quarter.	Q4 is 36.5% of annual sales (₹1,978,359). November is the peak month (₹776,952) and December falls 31.4%. Q1 sales: ₹915,428.	Build stock and ad budget before October. Run a loyalty or clearance push in December to Q1 so the dip is shallower.	₹18,041
5	A minority of Champion customers produces most of the sales, and a sizeable At Risk group is slipping away.	67 Champions (30% of customers) generate 62.6% of sales. 56 At Risk customers have spent ₹457,582.	Launch a VIP programme (early access, free shipping) for Champions and a win-back offer for At Risk customers.	₹20,447

All impacts are profit estimates in ₹. Finding 1 is the loss avoided by not selling above 20% discount (a floor: it ignores extra profit if customers still buy at 20%). Finding 2 is the total loss on loss-making Furniture orders. Findings 3 to 5 use the assumptions above, other factors held constant. Assumptions: 5% sales uplift on Class A products; 10% sales uplift in Jan to Mar; 20% of At Risk customers' annual spend won back. Data: practice dataset of 12 monthly CSV files (1,210 rows) cleaned to 1,200 orders. Method and workbook: see the project README.
